

Download file hw5_database.sql, load the file using command mysql.
This file will recreate database bp_48, load 2 tables: cars, manufacture

When tables are loaded, perform the following SQL queries, using 2 tables above:

- 1) Show all information about cars, produced by 'Toyota'
- 2) Show Total Cost of all cars produced by: 'Honda', 'Toyota'.
- 3) Show average price of cars per manufacturer.
- 4) Show the information about manufacturer, which produced maximal number of cars:
`Manufacturer Name` `Manufacturer Country` `Cars names`
- 5) Find the manufacturer of cheapest car and print its name, country and car price.

Write your solution into file hw5_mysolution.sql and bring it to the next lecture.
